H. Ben Khedher, H., Yıldırım, E., Braham, M., 2021. New records of Crabronidae fauna (Hymenoptera, Apoidea) of Tunisia. *Arxius de Miscel·lània Zoològica*, 19: 53–64, Doi: <https://doi.org/10.32800/amz.2021.19.0053>

Abstract

New records of Crabronidae fauna (Hymenoptera, Apoidea) of Tunisia. This study contributes to the knowledge of Crabronidae fauna in Tunisia based on specimens collected between 2017 and 2019. Thirty–three species and subspecies belonging to 14 genera representing three subfamilies, Astatinae, Crabroninae and Pemphredoninae, are identified. Fifteen species are new records for the Tunisian insect fauna: *Astata apostata* Mercet, 1910; *A. gallica* de Beaumont, 1942; *Dryudella pulawskii* Schmid–Egger, 2014; *Prosopigastra nuda* (Nurse, 1903); *P. punctatissima africana* de Beaumont, 1955; *Tachytes niloticus* R. Turner, 1918; *Liris agilis* (F. Smith, 1856); *L. cleopatra* de Beaumont, 1961; *Miscophus papyrus* de Andrade, 1954; *Solierella andradei* de Beaumont, 1957; *S. insidiosa* de Beaumont, 1964; *Palarus parvulus* de Beaumont, 1949; *Trypoxylon deceptorium* Antropov, 1991; *Diodontus insidiosus* Spooner 1938; and *Mimumesa unicolor* (Vander Linden, 1829). Except for *Ectemnius confinis* (Walker, 1871), all the identified species have new provincial records. Geographical distribution in Tunisia and the world is given.

Resumen

Nuevos registros de fauna de Crabronidae (Hymenoptera, Apoidea) de Túnez. Este trabajo contribuye al conocimiento de la fauna de Crabronidae presente en Túnez a partir de especímenes recolectados entre los años 2017–2019. Se identificaron 33 especies y subspecies pertenecientes a 14 géneros de tres subfamilias: Astatinae, Crabroninae y Pemphredoninae. Quince especies son nuevos registros para la fauna de insectos de Túnez: *Astata apostata* Mercet, 1910; *A. gallica* de Beaumont, 1942; *Dryudella pulawskii* Schmid–Egger, 2014; *Prosopigastra nuda* (Nurse, 1903); *P. punctatissima africana* de Beaumont, 1955; *Tachytes niloticus* R. Turner, 1918; *Liris agilis* (F. Smith, 1856); *L. cleopatra* de Beaumont, 1961; *Miscophus papyrus* de Andrade, 1954; *Solierella andradei* de Beaumont, 1957; *S. insidiosa* de Beaumont, 1964; *Palarus parvulus* de Beaumont, 1949; *Trypoxylon deceptorium* Antropov, 1991; *Diodontus insidiosus* Spooner 1938; y *Mimumesa unicolor*

(Vander Linden, 1829). Excepto *Ectemnius confinis* (Walker, 1871), todas las especies identificadas son nuevos registros provinciales. Se establece la distribución geográfica de cada una de las especies en Túnez y en el mundo.

Resum

Nous registres de fauna de Crabronidae (Hymenoptera, Apoidea) de Tunísia. Aquest treball contribueix al coneixement de la fauna de Crabronidae present a Tunísia a partir d'espècimens recol·lectats entre els anys 2017–2019. Es van identificar 33 espècies i subespècies pertanyents a 14 gèneres de tres subfamílies: Astatinae, Crabroninae i Pemphredoninae. Quinze espècies són nous registres per a la fauna d'insectes de Tunísia: *Astata apostata* Mercet, 1910; *A. gallica* de Beaumont, 1942; *Dryudella pulawskii* Schmid–Egger, 2014; *Prosopigastra nuda* (Nurse, 1903); *P. punctatissima africana* de Beaumont, 1955; *Tachytes niloticus* R. Turner, 1918; *Liris agilis* (F. Smith, 1856); *L. cleopatra* de Beaumont, 1961; *Miscophus papyrus* de Andrade, 1954; *Solierella andradei* de Beaumont, 1957; *S. insidiosa* de Beaumont, 1964; *Palarus parvulus* de Beaumont, 1949; *Trypoxylon deceptorium* Antropov, 1991; *Diodontus insidiosus* Spooner 1938; i *Mimumesa unicolor* (Vander Linden, 1829). Excepte *Ectemnius confinis* (Walker, 1871), totes les espècies identificades són nous registres provincials. S'estableix la distribució geogràfica de cadascuna de les espècies a Tunísia i al món.

Introduction

Faunal and systematic studies are necessary for adequate measures to be taken to protect biodiversity and maintain the equilibrium of the ecosystem (Renner and Ricklefs, 1994). However, studies on insects from Tunisia, including Spheciforms wasps, are scarce. According to Brothers (1999) and Melo (1999), the systematic and taxonomic position of this group of insects includes four families: Ampulicidae, Crabronidae, Heterogynaidae and Sphecidae. Several studies from around the world have focused on Crabronidae and studies dealing with Spheciformes in Tunisia were recently performed by Ben Khedher et al. (2019, 2020a, 2020b, 2020c, 2020d, 2020e, 2020f) and Mokrousov and Ben Khedher (2020). These contributions have considerably improved the knowledge of Tunisian fauna. Ben Khedher et al. (2020a) identified 22 species of the family Crabronidae Latreille, 1802 from Tunisia. A completed checklists for the family Sphecidae Latreille, 1802 and for the

genera *Cerceris* Latreille, 1802 and *Tachysphex* Kohl, 1883 and for tribes Philanthini Latreille, 1802 and Pseudoscoliini Menke, 1967 have been established, listing 143 species and subspecies and reporting 11 new records for the country (Ben Khedher et al., 2020b, 2020c, 2020d, 2020e). The present study is a continuation of these publications and further contributes to knowledge of the Crabronidae fauna in Tunisia.

Material and methods

The present study is based on specimens collected from Tunisia using entomological nets between 2017 and 2019. Diverse identification keys, such as Pulawski (1959, 1962, 1979), Pulawski and Prentice (2008) and Schmid–Egger (2014), were used to identify specimens. Records published in Tunisia and distribution in the world are given for each species. Classification and general distribution mainly follow Pulawski (2020). Identified species are deposited in the collection Ben Khedher in the Regional Research Centre on Horticulture and Organic Agriculture at Chott Meriem (CRRHAB Chott Meriem, Sousse, Tunisia).

Results

Subfamily: Astatinae Lapeletier de Saint Fargeau, 1845

Tribe: Astatini Lapeletier de Saint Fargeau, 1845

Astata Latreille, 1796

Astata apostata Mercet, 1910

Material examined: Mahdia: Sidi Alouane, Saada, 35° 22' 0.2" N, 10° 49' 52.1" E, 74 m, 18/06/2019, ♀.

Comment: this species is new for the Tunisian fauna.

General distribution: North Africa, Eastern Europe, Southern Europe, Western Europe, Iran, Kazakhstan, Russia, Turkey (Antropov et al., 2017).

Astata boops (Schrank, 1781)

Material examined: Mahdia: Sidi Alouane, Ghlalba, 35° 22' 49.6" N, 10° 49' 50.6" E, 48 m, 19/06/2019, ♀.

Distribution in Tunisia: Tunis (Costa, 1893; Graeffe, 1906); Kairouan, Tunis (von Schulthess, 1926).

General distribution: Russia, Europe, North Africa, Abkhazia, Turkey, Israel, Yemen, Iran, Afghanistan, Turkmenistan, Tajikistan, Uzbekistan, Kazakhstan, Mongolia, China, Korean Peninsula, India (Antropov et al., 2017), Kuwait, Saudi Arabia (Gadallah, 2020).

Astata gallica de Beaumont, 1942

Material examined: Mahdia: Sidi Alouane, Oued Beja, Khdhara, 35° 19' 52.2" N, 10° 53' 16.9" E, 54 m, 12/06/2017, ♀.

Comment: this species is new for the Tunisian fauna.

General distribution: Czech Republic, France, Italy, Morocco, Portugal, Slovakia, Spain, Turkey (Pulawski, 2020).

Dryudella Spinola, 1843

Dryudella beaumonti (Pulawski, 1959)

Material examined: Mahdia: Sidi Alouane, Ghlalba, 35° 22' 49.6" N, 10° 49' 50.6" E, 48 m, 19/06/2019, 2 ♂♂; Sousse: Akouda, Chott Meriem, 35° 55' 4.2" N, 10° 33' 57.9" E, 17 m, 12/06/2018, 5 ♂♂.

Distribution in Tunisia: Kairouan (Pulawski, 1959).

General distribution: North Africa (Pulawski, 2020).

Dryudella bifasciata (von Schulthess, 1926)

Material examined: Kebili: South Kebili, Errahmat, 33° 39' 1.8" N, 08° 58' 27.4" E, 30 m, 17/05/2018, ♂; Tataouine: Ghomrasen, Ghordhab, 33° 05' 6.4" N, 10° 29' 46.2" E, 159 m, 08/05/2018, 7 ♂♂, ♀.

Distribution in Tunisia: Kairouan (von Schulthess, 1926).

General distribution: Arabian Peninsula (Kuwait, United Arab Emirates), Canary Islands, Israel, Jordan, North Africa, Spain (Gadallah, 2020).

Dryudella pulawskii Schmid–Egger, 2014

Material examined: Mahdia: Sidi Alouane, Chammar, 35° 18' 34.3" N, 10° 53' 31.6" E, 65 m, 05/05/2018, 2 ♀♀.

Comment: this species is new for the Tunisian fauna.

General distribution: United Arab Emirates (Schmid–Egger, 2014).

Subfamily: Crabroninae Latreille, 1802

Tribe: Crabronini Latreille, 1802

Subtribe: Crabronina Latreille, 1802

Ectemnius Dahlbom, 1845

Ectemnius confinis (Walker, 1871)

Material examined: Kebili: Douz, West Douz, 33° 27' 4.1" N, 9° 1' 4.5" E, 63 m, 19/05/2018, ♀.

Distribution in Tunisia: Kebili (Dollfuss, 2004); Tunis (Gribodo, 1896).

General distribution: Afghanistan, China, Europe, India, Japan, Jordan, Kazakhstan, Korean Peninsula, North Africa, Middle Asia, Pakistan, Palestine, Russia, Turkey (Pulawski, 2020).

Ectemnius continuus (Fabricius, 1804)

Material examined: Monastir: Bakalta, Hamedet Younes, 35° 37' 39.5" N, 11° 0' 11.2" E, 13 m, 27/07/2017, ♂.

Distribution in Tunisia: Tunis (Graeffe, 1906; Leclercq, 1993); Tunisia: 'no specific locality' (Costa, 1893).

General distribution: Russia, Europe, North Africa, Georgia, Azerbaijan, Turkey, Syria, Jordan, Israel, Iran, Iraq, Central Asia, Kazakhstan, Mongolia, China, Korean Peninsula, Japan, North America, Cuba, Guatemala, Venezuela (Antropov et al., 2017).

Tribe: Larrini Latreille, 1810

Subtribe: Gastrosericina André, 1886

***Gastrosericus* Spinola, 1839**

***Gastrosericus moricei* E. Saunders, 1910**

Material examined: Kasserine: Sbeitla, Athar, Oued Nakhil, 35° 14' 41.6" N, 9° 5' 40.5"E, 562 m, 04/09/2018, ♀; Tozeur: Dguech, Elmanechi, 33° 58' 41.5" N, 8° 12' 33.1" E, 63 m, 29/06/2018, 3 ♂♂, ♀, Nefta, Nefta Corbeille, 33° 51' 0.0" N, 7° 51' 52.4" E, 25 m, 28/06/2018, ♀.

Distribution in Tunisia: Jendouba, Medenine, Tozeur (Pulawski, 1995).

General distribution: Arabian Peninsula (Oman, Saudi Arabia, United Arab Emirates, Yemen), Burkina Faso, Gambia, India, Israel, Kazakhstan, Mali, Niger, North Africa, Pakistan, Senegal, Somalia, Sri Lanka, Sudan, Tajikistan, Thailand, Togo (Gadallah, 2020), Iran (Ghaderipour et al., 2020).

Comment: this species is new for the Tunisian fauna.

General distribution: Afghanistan, Azerbaijan, China, Europe, Iraq, Kazakhstan, Middle Asia, Pakistan, Palestine, Russia, Turkey (Pulawski, 2020).

Discussion

In this study, 33 species from 14 genera and three subfamilies: Astatinae (two genera, six species), Crabroninae (10 genera, 25 species) and Pemphredoninae (two genera, two species), are identified and include 15 newly recorded taxa for Tunisia. To date, *Solierella andradei* has only been reported from Morocco (de Beaumont, 1957) and *Dryudella pulawskii* from the United Arab Emirates (Schmid–Egger, 2014). This study therefore adds Tunisia as a second repartition area for these two taxa worldwide.

Some of the species and subspecies from Tunisia have been recorded previously (de Beaumont, 1961; Pulawski, 1979; Bitsch and Leclercq, 2009) but the authors did not specify locality. These taxa are: *Prosopigastra zalinda*, *Liris festinans praetermissus* and *Oxybelus spectabilis*. In the present study, the presence of these taxa in Tunisia is confirmed by new provincial records. Also, *Dryudella beaumonti*, *Prosopigastra punctatissima africana* and *Solierella andradei* are three species known as North African species that occur only in this region.

Species identified in this study were collected from 13 provinces and most of them have new local and provincial records. Mahdia province is the richest with 15 species and subspecies, followed by Kebili (10 species and subspecies), Tataouine, and Tozeur (six species and subspecies). Despite the attention and contributions given to Crabronidae in Tunisia, knowledge of this fauna has yet to be extended, especially in the provinces of Kasserine, Siliana and Zaghuan where records are limited.

Acknowledgements

We would like to thank Dr. Toshko Ljubomirov (Institute of Biodiversity and Ecosystem Research, Bulgarian Academy of Sciences) for identifying a part of the material. We also thank the directors of the Agriculture Vocational Training centres (CFPA) of Sbeitla–Kasserine, Testour–Beja and Ghordhab–Tataouine and the directors of: Regional Research Centre on Horticulture and Organic Agriculture at Chott Meriem (CRRHAB)–Sousse, Institute of Arid Regions (IRA)–Regional Direction of Kébili and Regional Centre for Research in Oasian Agriculture (CRRAO) Deguache–Tozeur (Tunisia) for their significant collaboration and help in the collection of specimens from various regions of Tunisia.
